SUMMARY

Results-driven **Software Developer** with **2+ years of industry experience** building production-grade web applications. Core expertise in **Frontend Development** with **Next.js** and **React.js**, complemented by strong **Backend Development** skills in **Golang** and API design. Proven ability to architect and deliver complete features across the entire stack—from responsive component libraries and state management to scalable REST APIs, database modeling with **PostgreSQL/MySQL**, and secure authentication flows. Experienced in building AI-powered features, implementing role-based access control, and designing content moderation workflows. Strong foundation in **Data Structures and Algorithms** enables writing optimized, maintainable code on both client and server. Collaborative team player who bridges frontend and backend disciplines to deliver cohesive, high-quality software solutions.

SKILLS

Languages: C, C++, SQL, JavaScript

Web Development: React.js, Next.js, Golang, Tailwind CSS, Node.js, Express.js

Databases: PostgreSQL, MySQL

Tools and Technology: Git, Docker, Postman, REST APIs, JWT

WORK EXPERIENCE

NISG (NATIONAL INSTITUTE FOR SMART GOVERNMENT) | DEVELOPER (NEXT.JS, GOLANG, POSTGRESQL)

Bengaluru, Karnataka | December 2023 – Present

Working on the **IT 2.0 initiative** for the **Center for Excellence in Postal Technologies (CEPT)** at **India Post**, building customer and grievance management solutions for postal operations.

- Developed full-stack customer and grievance management modules using **Next.js** frontend with **React Hook Form** for complex form validations and **Golang** backend services.
- Built interactive dashboards and analytics interfaces with **Chart.js** to visualize customer data and grievance trends for operational insights.
- Designed and implemented **RESTful APIs** in Golang for customer data operations, grievance tracking, and external customer integrations with **PostgreSQL** database.
- Integrated **Redis** caching layer for frequently accessed GET endpoints, reducing database load and improving average response times.
- Implemented state management using React hooks and Context API, optimizing component re-renders for smoother UI performance. responsive, accessible interfaces with Tailwind CSS, ensuring consistent experience across devices and compliance with accessibility standards.
- Collaborated with backend teams to define API contracts and ensure seamless frontend-backend integration with type-safe data handling.

EDUCATION

BTech, Computer Science and Engineering

UIET, KURUKSHETRA

CGPA- 8.0 | Jun 2023

12th Standard

HBSE, BHIWANI

Percentage- 75.0 | Mar 2018

10th Standard

PROJECTS

AI-POWERED INTERVIEW PREP PLATFORM  NEXT.JS, REACT, POSTGRESQL, JWT, REST APIs, TAILWIND CSS, DOCKER, GEMINI, GROQ

- Developed full-stack interview platform with Next.js frontend and PostgreSQL backend; implemented topic-based learning paths for Q&A, coding exercises, and MCQ quizzes with responsive mobile-first UI.

- Built RESTful API layer using Next.js Route Handlers with JWT authentication and role-based access control via middleware; secured admin routes and content management operations.
- Architected AI content generation pipeline with multi-provider fallback (Gemini, Grog) and governance controls including kill switch, daily operation caps, and budget monitoring to prevent cost overruns.
- Implemented content moderation workflow with review queue, approve/reject decisions, publish/rollback capabilities, and audit logging for traceability of all content operations.
- Designed PostgreSQL schema supporting technologies, topics, questions, exercises, review queue, and audit logs; containerized with Docker for environment consistency.
- Integrated quality validation gates for AI-generated content with automated duplicate/placeholder detection and remediation tools to maintain content standards.

FULL-STACK E-COMMERCE PLATFORM **REACT, GO, GIN, POSTGRES SQL, SQLC, JWT, REST APIs, DOCKER**

- Built full-stack e-commerce solution with React frontend and Go/Gin backend; implemented product discovery, category filtering, search, cart management, and order placement flows.
- Designed modular REST APIs with layered architecture (handlers, services, repositories) for authentication, product catalog, cart, and order processing; secured endpoints with JWT middleware.
- Optimized PostgreSQL schema with SQLC-generated type-safe queries; implemented transaction-safe checkout and inventory updates to maintain data consistency.
- Created reusable React components with responsive design patterns, state management, and optimized re-renders for improved performance across devices.
- Implemented comprehensive request validation, centralized error handling, and standardized HTTP responses to simplify frontend integration and debugging.
- Containerized backend and database with Docker for reproducible local development and deployment-ready configuration.
